Elastic Cloud Compute (EC2)

Elastic Cloud Compute (EC2)

- Remote virtual machine based on your specs

Elastic Cloud Compute (EC2)

- Remote virtual machine based on your specs

- Select the Operating System (MS Windows or Linux)

Elastic Cloud Compute (EC2)

- Remote virtual machine based on your specs
- Select the Operating System (MS Windows or Linux)
- You get the Operating System pre-installed … that's it

Elastic Cloud Compute (EC2)

- Remote virtual machine based on your specs
- Select the Operating System (MS Windows or Linux)
- You get the Operating System pre-installed … that's it
- Manually install your own apps on top of OS (Tomcat, DB, etc …)

Elastic Cloud Compute (EC2)

- Remote virtual machine based on your specs
- Select the Operating System (MS Windows or Linux)
- You get the Operating System pre-installed … that's it
- Manually install your own apps on top of OS (Tomcat, DB, etc …)

Can also use custom Amazon "Images"

Elastic Beanstalk

Elastic Beanstalk

- Quickly deploy web applications with Elastic Beanstalk

Elastic Beanstalk

- Quickly deploy web applications with Elastic Beanstalk

- Select pre-configured virtual machine for your web app stack

Elastic Beanstalk

- Quickly deploy web applications with Elastic Beanstalk

JAVA

- Select pre-configured virtual machine for your web app stack

Elastic Beanstalk

- Quickly deploy web applications with Elastic Beanstalk

- Select pre-configured virtual machine for your web app stack

- No software to install on virtual machine

Elastic Beanstalk

- Quickly deploy web applications with Elastic Beanstalk

JAVA

- Select pre-configured virtual machine for your web app stack

- No software to install on virtual machine

- Just deploy your code (zip, war etc)

Elastic Beanstalk

- Quickly deploy web applications with Elastic Beanstalk
- Select pre-configured virtual machine for your web app stack
- No software to install on virtual machine
- Just deploy your code (zip, war etc)

Java on AWS

Java on AWS

- You can use regular Java EE APIs

Java on AWS

- You can use regular Java EE APIs

- Can use 3rd-party frameworks: Spring, Hibernate etc

Java on AWS

- You can use regular Java EE APIs
- Can use 3rd-party frameworks: Spring, Hibernate etc
- All based on standard Java

Java on AWS

- You can use regular Java EE APIs
- Can use 3rd-party frameworks: Spring, Hibernate etc
- All based on standard Java

THERE ARE NO PROPRIETARY AMAZON HOOKS
